Abstract

1. INTRODUCTION
2. JOURNAL EVALUATION IN CHINA
3. THE LEADING JOURNAL EVALUATION SYSTEMS OF ACADEMIC JOURNALS IN CHINA

Abstract

Journal evaluation systems reflect how new insights are critically reviewed and published, and the prestige and impact of a discipline's journals is a key metric in many research assessment, performance evaluation, and funding systems. With the expansion of China's research and innovation systems and its rise as a major contributor to global innovation, journal evaluation has become an especially important issue. In this paper, we first describe the history and background of journal evaluation in China and then systematically introduce and compare the most currently influential journal lists and indexing services. These are the Chinese Science Citation Database (CSCD), the Journal Partition Table (JPT), the AMI Comprehensive Evaluation Report (AMI), the Chinese S&T Journal Citation Index (CSJCI), and the Journal of Chinese Literature (JCL). The paper concludes with a discussion of the challenges and prospects of journal evaluation in China. <https://doi.org/10.1163/ess.2020.0010>

Research Project on Core Journals

Dear readers,

Due to the questions frequently raised by readers about *A Guide to the Core Journals of China*, we are hereby making some simple clarifications:

1. *A Guide to the Core Journals of China* is a research project conducted and participated by researchers in the Peking University library and a dozen other university libraries as well as experts of related institutions. The research findings are published in printed books, and, up to now, there have been 8 editions published by Peking University Press: the first edition (1992); the second edition (1996); the third edition (2000); the fourth edition (2004); the fifth edition (2008); the sixth edition (2011); the seventh edition (2014); the eighth edition (2017). These findings have not been published on the website yet, and the various versions of core journal list in the name of *A Guide to the Core Journals of China* on the internet are not put forward by this project.

2. As to question of "the period of validity," it has to be clarified that *A Guide to the Core Journals of China* is regularly updated

<https://www.lib.pku.edu.cn/portal/en/bggk/qikanyaomu>

it is not

an evaluative standard of academic studies and hasn't legal and administrative effectiveness, So the saying of this *Guide's* "period of validity" is inadequate, its application is up to those institutions that make use of it. But it is

Working Capital Management Performance Evaluation of ABC Company

Yihong Liu,Zhihong Lin;School of Business and Administration, North China Electric Power University;
Information Engineering Research Institute, USA

Keywords

Working capital management;;Performance;;Working capital

Abstract

With the continuous development of financial management, working capital management has been paid more and more attention, working capital management level directly determines the capital profitability level of an enterprise. In this paper, we use working capital management based on channel management method to study the working capital management performance of ABC both in theory and practice. It not only provides a scientific method for the working capital management performance evaluation but also benefits from improving the current management system of

Financial and Economic Crisis and Corporate Finance Development **English Full Text**

LI Xinhe; Nanjing University;

Abstract: Financial and economic crisis has challenged the ideological and methodological basis, the basic assumptions and the universal applicability of the research conclusions of the mainstream corporate finance. In order to construct corporate finance appropriate to the state of financial crisis, it is necessary to adjust the objective function of corporate finance, modify the corporate financing theory, extend corporate investment theory, enrich corporate working capital management theory, and adjust ... Abstract

The critical issue of environmental sustainability is among the top priorities of sustainable development goals (SDGs) and the conference of parties (COP) 26. This study extensively analyzes the impact of green finance (GF), renewable energy investment, technological capital, and economic development on green growth (GG) in the context of China. The empirical results show that green finance, renewable energy investment, and technological capital have a positive and significant impact on green growth. However, economic development has a negative and significant impact on green growth. The results also show that the impact of green finance, renewable energy investment, and technological capital on green growth is stronger in the short run than in the long run. The results also show that the impact of economic development on green growth is stronger in the long run than in the short run.

Toward green growth in China: The role of green finance investment, technological capital, and renewable energy consumption

Feina Fu & Sana Ullah

Environmental Science and Pollution Research (2023) | [Cite this article](#)117 Accesses | [Metrics](#)

Abstract

In recent times, the concept of green growth has emerged, which has a critical part to play in controlling the environmental impact of economic activities. In this analysis, we have explored three determinants of green growth: green finance investment, technological capital, and renewable energy. Moreover, this study focuses on the asymmetric impact of green finance investment, technological progress, and renewable energy on green growth in China during the period spanning from 1996 to 2020. To get the asymmetric short and long-run estimates across various quantiles, we have employed the nonlinear QARDL. The long-run estimates
